SUMMARY

- Aspiring **Data Engineer** with a strong foundation in **data engineering fundamentals, ETL pipeline development, and big data technologies**. Proficient in **Python, SQL, and PySpark** for **data processing, transformation, and Exploratory Data Analysis (EDA)**. Experienced in analyzing datasets using **Pandas and SQL** to identify patterns, handle missing data, and prepare data for analytics workflows.
- Knowledge of **data pipelines, batch processing**, and **data warehousing** using **Spark, Airflow, Snowflake**, **Databricks,** and **AWS.**
- Passionate about developing **scalable and efficient data pipelines** and enabling reliable **data processing and analytics**. Seeking a **Data Engineer internship** to apply my skills and gain hands-on industry experience.

TECHNICAL SKILLS

Languages : C, C++, Python 3, SQL, Bash.
Framework/Library : Pandas, NumPy, Matplotlib, Seaborn, PySpark, Apache Airflow.
Devloper Tools : PostgreSQL, Databricks, Power BI, Tableau, VS Code, Jupyter Notebook.
AI Tools : Claude Code, ChatGPT, Cursor.

PROJECTS

San Francisco Employee Salary Data Analysis | Python, Pandas : **Jan - 2026**
Tech Stack: Python, Pandas, NumPy, Jupyter Notebook.

- Processed and analyzed 148K+ employee salary records using Python and Pandas to extract workforce compensation insights.
- Performed data cleaning and preprocessing, handling missing values and improving dataset quality by 20% for reliable analysis.
- Conducted Exploratory Data Analysis (EDA) to examine salary distribution, job roles, and overtime trends across 1000+ job titles.
- Generated data-driven insights and summarized compensation patterns, enabling faster analytical reporting by 30%.

Smart Electricity Consumption Monitoring & Optimization System : **Mar - 2026**
Tech Stack: Python, Pandas, SQL, PostgreSQL, Apache Airflow, Tableau.

Built an end-to-end ETL pipeline in Python (Pandas) to process and transform 1M+ smart meter records, performing data cleaning, time-based feature engineering, and energy consumption analysis.

- Designed a data pipeline architecture to ingest raw CSV data, transform it into structured datasets, and load it into PostgreSQL, improving query efficiency for analytical workloads.
- Implemented workflow orchestration using Apache Airflow to automate ETL tasks and schedule daily pipeline execution, reducing manual processing effort by ~70%.
- Developed an interactive dashboard in Tableau with 6+ visualizations to analyze hourly trends, appliance-level consumption, and peak demand periods, identifying opportunities for 15–20% potential energy optimization.

EDUCATION

KIPM College of Engineering & Technology **Aug 2024 - Present**
B.Tech - Artificial intelligence / Machine Learning *Gorakhpur, Uttar Pradesh*
Intermidiate **Mar 2022 – Apr 2023**
C D M I C Manikapar *Gorakhpur, Uttar Pradesh*

CERTIFICATION

- Advance Python
- Python Library
- SQL
